

KLIKSTAK

ALLOY CHIMNEY SCAFFOLD

- ▶ An advanced Chimney Scaffold which is lightweight and easy to assemble and safe in use
- ▶ Very versatile - fits central ridge stacks, roof pitch stacks and gable end stacks and even dormer windows
- ▶ Comprises corner units which can be linked together according to type of stack
- ▶ Adjustable for different pitch angles up to 60degrees.
- ▶ Each corner unit fits any corner of the chimney - units are not handed
- ▶ Can be linked to alloy towers for most end chimney applications
- ▶ Fully protects roof tiles and is extendible from ridge to gutter
- ▶ Only five main components - Ridge Hanger; Single-Width Alloy Frame; Adjustable Platform Assembly; Guardrail Unit; Toeboard Assembly
- ▶ Corner units can be linked with standard scaffold boards or staging boards plus scaffold tube handrails
- ▶ No straps or ballast required
- ▶ Safe working load of 175kg per corner unit

KLIKSTAK

ALLOY CHIMNEY SCAFFOLD

Klikstak is an advanced Chimney Scaffold which is lightweight and easy to assemble and safe in use.

Full Kit gives all the components necessary to scaffold all four corners of a central ridge stack, each unit having a safe working load of 175kg.

Customers only need to add either scaffold boards or staging boards plus toeboards to link the corner units at front and rear.

If required, Lansford will be pleased to quote for the supply of staging boards & roof ladders.

Although few customers bother with it, we would point out that to comply with Health & Safety regulations, some form of scaffold (e.g. alloy towers or tubular steel scaffolding) should be erected at eaves level to provide the extra safety of edge protection for employees as they are carrying Klikstak components up & down the roof ladders

Klikstak's excellent versatility means it can be adapted to reach chimney stacks and dormer windows located down the pitch of the roof.

Just add the Pitch Extension Kit to extend the support frames down the pitch, attach two corner units and link together with own staging boards, handrails & toeboards. Can also be linked to alloy towers or steel tube scaffolding for most gable-end chimney applications.

Height Extension Kits provide safe access to very tall stacks.

KLIKSTAK

ALLOY CHIMNEY SCAFFOLD

HEIGHT EXTENSION KIT

Height Extension Kits provide safe access to very tall stacks. One kit is required for each corner unit used. This is normally used with a Pitch Extension Kit for reaching very tall stacks situated in the roof pitch.

Height extension frames locate onto the spigots of the standard Klikstak platforms in place of guardrail frames. A trapdoor platform is included with height kits for safe access to the platform.
